

Biomass Boiler Workshop

May 22 and 23, 2024

Madison, Wisconsin

Biomass Boiler Workshop in the US Midwest

The Biomass Boiler Workshop provides a unique opportunity for representatives from the Pulp and Paper, Forest Products, Food Industries, Power Sector, Independent Power Producers, and Energy-from-Waste Industries to learn and network. In May, we bring our first North American Workshop of 2024 to Madison, Wisconsin, the Capitol of the Badger State.

The event comprises presentations of latest technological developments that have improved the operating performance, burning capacity, efficiency, and fuel firing flexibility of biomass and other solid fuel fired boilers.

Participants will:

- Learn about the latest retrofit technology for biomass and other solid fuel fired boilers and associated equipment.
- See how other plant operations solve their boiler area problems.
- Receive information for solutions to meet specific goals.

The Workshop is sponsored by

Jansen has upgraded the performance of over 125 biomass and other solid fuel fired boilers in various industries. These upgrades have:

- Increased fuel firing capacity.
- Reduced fossil fuel firing and lowered carbon footprint.
- Improved emissions performance (CO, NO_x, VOC, particulate matter).
- Reduced unburned char carryover and lowered unburned losses.
- Reduced erosion by limiting ash carryover.
- Improved heat capture resulting in increased power generation rates, lowered stack gas exit temperatures, and increased thermal efficiency.
- Achieved compliance with regulatory emissions.

Attendance to the Workshop is **FREE OF CHARGE** but space is limited

Our Workshops fill up quickly!

An early sign-up is required to guarantee your spot.

To sign up and to receive a detailed agenda, workshop location, hotel information, etc., please contact **Cathy Thomas**
